

Procodile & Reflex - Endo

Agenda

- Reciprocating Opener
- Procodile
- EndoPilot – ReFlex

Reciprocating Opener - Portfolio

Reciprocating opener

- Constant tapers .10 and .08
- Sizes 030 and 025
- Length 19 mm
- Double-S cross-section made of NiTi
- Sterile / reusable
- Suitable for use in all established reciprocating power systems
- OPR08L19.204.025
- OPR10L19.204.030

Both versions of the Opener are suitable for universal use and can be combined with any file system or preparation technique

Procodile – Technical details

Sterile and single-use

STERILE R

Lasered depth marks at 18, 19,
20 and 22 mm

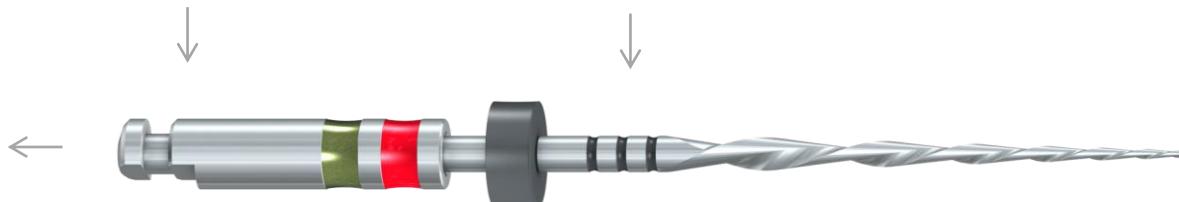

Nickel titanium files
**with variably
tapered file core**
(Double-S cross-
section) for
extraordinary cutting
performance and
flexibility.

Urkunde
Über die Eintragung des
Gebrauchsmusters Nr. 20 2019 100 258

Left cutting – for
use in established
reciprocating power
units

Non-cutting (safe)
instrument tip

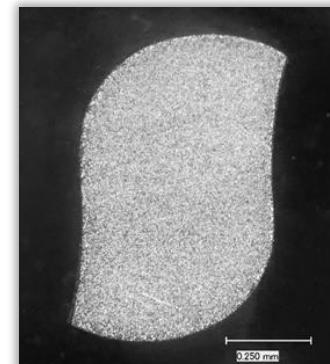

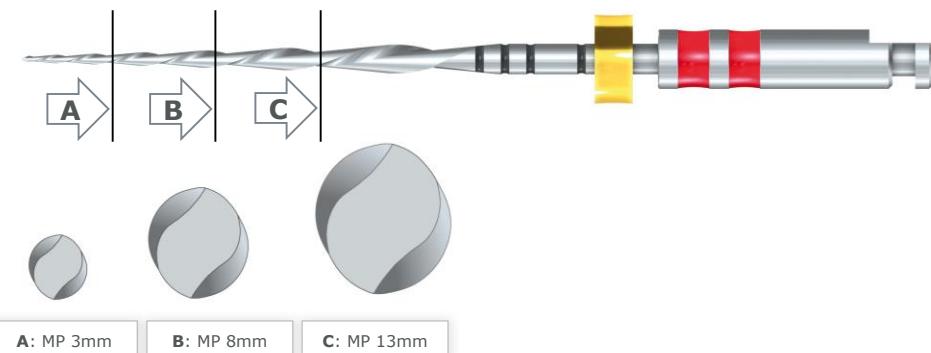

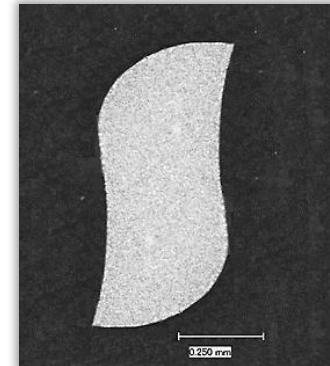

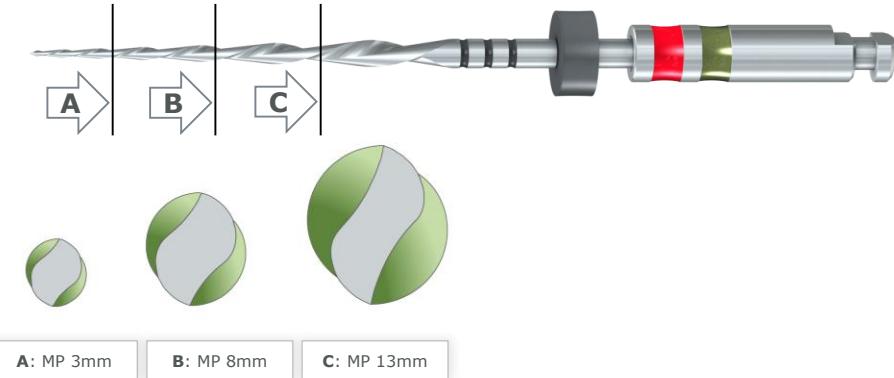

Two colored
rings (ISO) for
identification

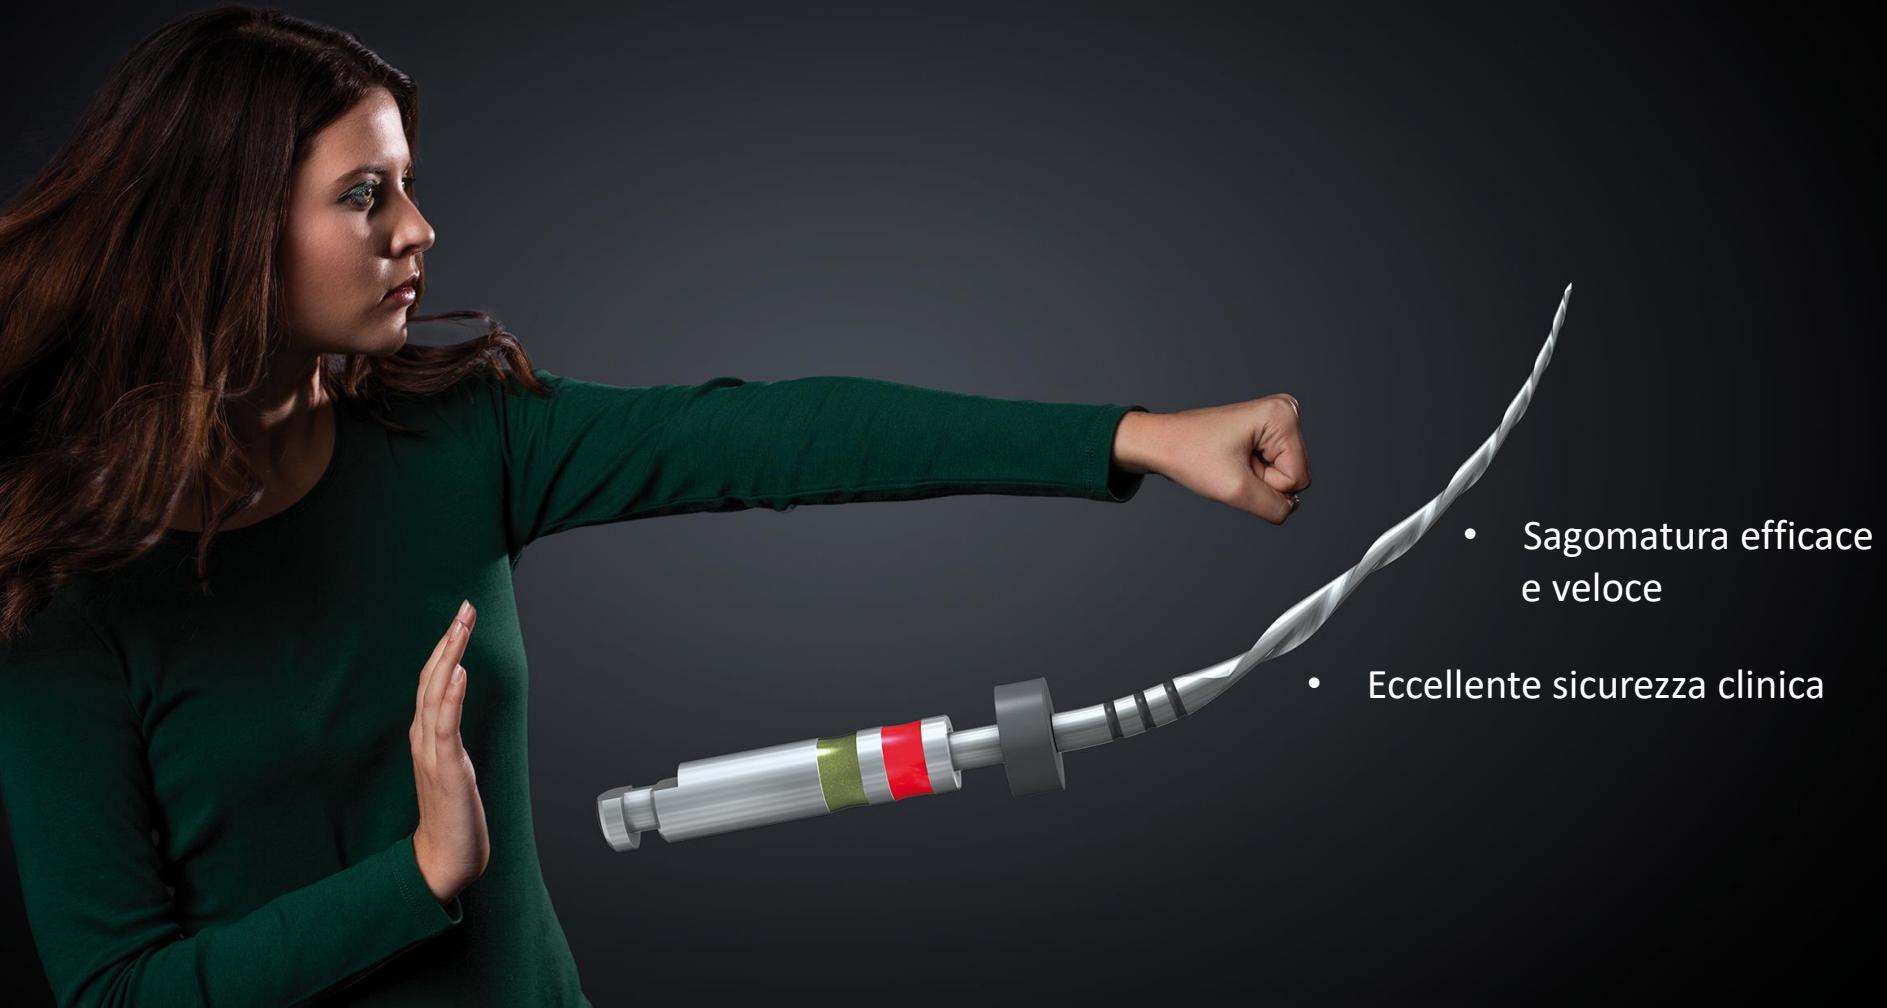

Radiopaque
silicone stopper

Constant
outer taper

Procodile – Variably tapered file core

- Sagomatura efficace e veloce
- Eccellente sicurezza clinica

Numerosi test hanno
confermato:

- Sicurezza
- Efficienza
- Semplicità
- Velocità operativa

Procodile – Step by Step

Step by Step

[01] Generous preparation of the canal entrance area, for example with the reciprocating Opener OPR08L19.

[02] Creation of a glide path, for example with a K-file in size 015. The choice of the suitable Procodile file depends on the size of the previously used (manual) file.

Rule: Skip one ISO file size.

[03] Preparation of the canal with the Procodile file.

[04] Obturation with a matching gutta-percha point.

Procodile – Testimonials

Dr. Björn Schaper
Dentist from Detmold

Niels Niemann
Dentist from Munich

„I'll happily recommend the Procodile system made by Komet to any colleague. This ingenious reciprocating system makes root canal treatments safe and easy. I am particularly impressed with the efficient substance removal along the entire length of the canal and the amazing flexibility of the files. I can use this system across the board to ensure high-quality preparations.“

“During my endodontic treatments, I like to work with a very effective file that can advance in complete safety even in curved and narrow canals. I noticed during my very first primary treatment that the Procodile files are easy and comfortable to use. They are not too aggressive, easy to control and their cutting performance is outstanding.“

Procodile – Summary

Reciprocating file with innovative variably tapered file core

Faster and more efficient substance removal thanks to increased chip spaces

Practically identical or even better properties compared to heat-treated files - for greater patient safety and optimum preparation even of curved root canals

- Cyclic fatigue
- Flexibility

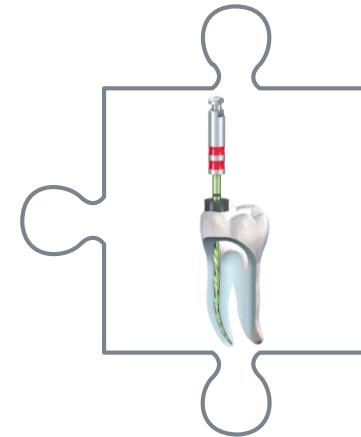

Suitable for all canal anatomies, the Procodile portfolio is wide and complete

EndoPilot – ReFlex

- The Endo Pilot motor best works together with Procodile files
- Endo Pilot has a mechanical drive system for left-cutting instruments and **this feature is patented**

EndoPilot – ReFlex

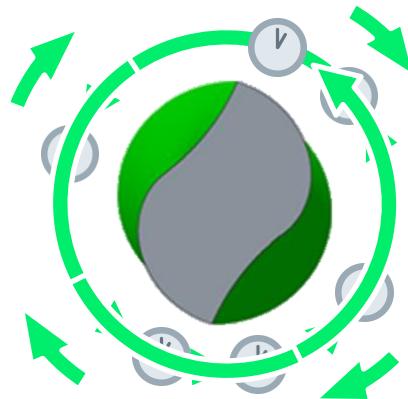

What is ReFlex?

- ReFlex is an innovative left-orientated movement on the EndoPilot
- ReFlex is capable of measuring the resistance exerted on the file (i.e. reset force or reset tendency of the file) and adapting the movement accordingly
- ReFlex will be available in two different modes with which our Procodile files can be powered:
 - ReFlex dynamic
 - ReFlex smart
- The set-up data of the modes are fixed, but it is possible to switch between "smart" and "dynamic" during the treatment

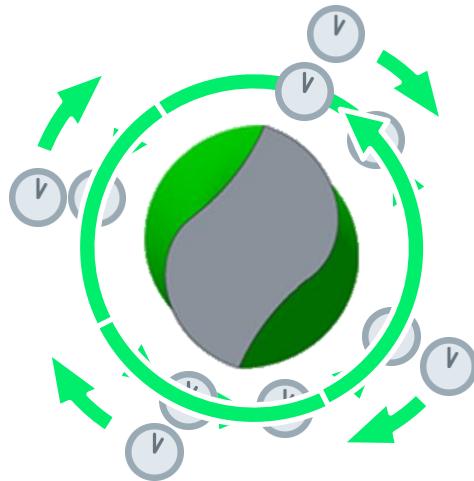

EndoPilot – ReFlex dynamic

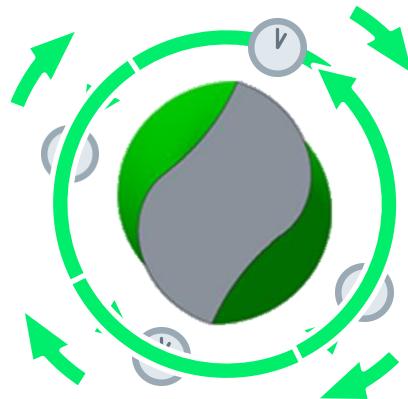

EndoPilot – ReFlex smart

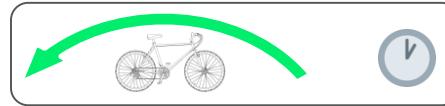

EndoPilot – ReFlex smart

EndoPilot – ReFlex smart

- Minor load

- The tip is loaded

- The file is loaded up to the center

- The major part of the file is loaded

EndoPilot – ReFlex: Advantages

What are the advantages of ReFlex?

- Combination of the advantages* of rotary and reciprocating motion
 - Less cyclic fatigue
 - Better centration in the root canal
 - Evacuation of debris

ReFlex dynamic

- Very fast work with maximum efficiency
- Ideal for straightforward canal anatomies

ReFlex smart

- Increased safety and tactile work during treatment
- Ideal for more complex canal anatomies, due to gentle motion that is perfectly adapted to the ambient conditions
- As tactile as required and as effective as possible

EndoPilot – ReFlex

Procedure:

- **The ReFlex movement is only available on the EndoPilot.**
- The settings are adapted **to suit the Procodile System**. They are currently available for this system, and the **EndoPilot is at present the only power unit provided with these settings**.
- Procodile and the ReFlex movement will be stored as a file system in all devices (EP0014)
- All existing EndoPilots (EP0014) can be equipped with the new movement by means of a software update.

EndoPilot – ReFlex: Summary

Intelligent and patented movement in the EndoPilot

Unites the advantages of rotary and reciprocating movements

Ideal combination with the Procodile files – Unique on the market

Perfectly adapted to the operator's requirements
