

MASTERCLASS

Two day anterior and posterior hands-on course

By Dr. Bora Korkut

GC GOES ABROAD

This 2-day hands-on masterclass will cover the clinical application techniques of anterior and posterior composite restoration such as diastema closure restoration, crown fracture restorations, and occlusal restorations with simple-lines and cusp-to cusp composite layering techniques. The contemporary restorative techniques such as injection moulding in anterior region and stamp injection in posterior region will also be presented in detail. Essential restorative instruments needed for a proper composite restoration and the clinical application techniques will be demonstrated.

LEARNING OBJECTIVES

- Accurately diagnose and plan restorative treatments based on clinical cases.
- Apply rubber dam isolation techniques for optimal moisture control.
- Understand and apply advanced polishing and surface treatment methods.
- Implement polychromatic layering techniques, including the use of a silicone key.
- Master the Injection Moulding Technique for predictable composite restorations.
- Apply proper adhesion and isolation protocols to ensure restoration longevity.

COST?

€1179*

(Incl. breakfast, coffee breaks, lunches, dinner, hotel, airport-hotel transport.
Excl: flights)

* All prices exclude VAT.
